

a

Single shooting: one initial condition, error compounding over the whole record

--- true trajectory $v(t)$ — single shooting from y_0 at wrong p • noisy data y_i

b

p_{wrong} : the true p^* with the v^3 coefficient $-1/3 \rightarrow -0.3$ and the $\dot{w}$ block scaled by 1.15 ($\|p - p^*\| = 0.0377$); noise floor $\mathcal{J} = 0.0052$
